Goals and Objectives:

- Interface between GMDI and the Southeast Regional Genetics Network (SERN) to support the GMDI/SERN Nutrition Guideline Development Project's objectives:
  - Create evidence and consensus-based recommendations for the nutrition management of patients with inherited metabolic disorders
  - Reduce variation in clinical practice and services across medical centers.
  - Guide practice decisions that integrate medical and nutrition management

Activities:

- Work with SERN to update PKU Nutrition Guideline to include recommendations on managing patients with PKU treated with pegvaliase.
- Develop PKU Toolkit case studies on pegvaliase management

WE NEED VOLUNTEERS TO:

- Participate in a Delphi practice survey on pegvaliase therapy
- Join workgroup for the development of toolkit case studies on pegvaliase therapy
